

Note

The alternatives are movable. To classify them, you have to drag and drop them at the good place. You can modify them by clicking in the box. If the user rename an alternative in a voter preference, the alternative is renamed in all the voters preferences.

Alert 1

! Destination already contains file "xxx.soc". Do you want to overwrite the file and lose the current modifications ?

Yes No Cancel

If the user put an URL and the corresponding file does not exist, the current profile is saved under that name in the current folder, and the name in the box is kept.

1. createProfile

#	Note
1	If the user types an URL and the file exists, a dialog box opens asking whether to load the file or overwrite it with the current profile
2	<p>The Open/Save as box lets the user specify the drive, directory, and the name of an url or a set of url to open or lets the user specify the drive, directory, and name of a file to save the profile</p> <p>Open by initializing an .soc file structure and passing the structure to the GetComposite() function.</p>
3	The Open/Save as box lets the user specify the drive, directory, and the name of an url or a set of url to open or lets the user specify the drive, directory, and name of a file to save the profile

New voter

If the user puts a URL that is not stored locally for example, the profile is loaded and the entry box is empty therefore becomes red

2. createProfileEmpty

As long as the profile name is not filled in, the input boxes are red to indicate that no file is created. When the file name is entered, the file is created and the red disappears from the input boxes.

#	Note
1	As long as the profile name is not filled in, the input boxes are red to indicate that no file is created. When the file name is entered, the file is created and the red disappears from the input boxes.
